NOKIA

It is not so much about languages anymore

Feature	Status	
Expressive power	Lots of choices, we're OK here	Less rather than more
Provenance	Reification, named graphs, etc.	We need a standard
Scalability	Still a challenge	My main challenge in "selling" the Semantic Web idea
Programming model	Difficult	Better programming language integration. ORM?
User interfaces	We are lost here	For one, requires a good programming model
